

TRANSNDEB

COMPANY PROFILE / 2026

Every journey moves business.

BOTSWANA HEADQUARTERS

SERVING MARKETS ACROSS AFRICA

TransNdeb

Road freight, fleet coordination and logistics support across African trade corridors.

OUR FOCUS

Transport & logistics

Transport is a chain of commitments. A consignment moves successfully when the vehicle, driver, loading point and receiving team work to the same plan. TransNdeb focuses on this coordination across road freight and the services that support it.

Our scope covers general freight, commercial cargo and partner-supported specialist transport. From our Botswana headquarters, we approach African routes through the requirements of the cargo, the customer and the corridor, with clear responsibility at each handover.

A specialist business within the Revi Management operating portfolio.

What we do

01 Road freight

Movement planned around the consignment.

The starting point is the cargo: its size, handling needs, collection arrangements and delivery window. These requirements inform the vehicle specification and route plan. Customer expectations are agreed before dispatch so that the service has a clear operational brief.

02 Cross-border coordination

Attention to the interfaces along the route.

Regional movements depend on more than distance. Documentation, border processes and receiving arrangements must be coordinated with the relevant parties. We plan these handovers and maintain communication around changes that could affect the journey.

03 Fleet coordination

Availability matched to the work.

A fleet plan connects demand with the vehicles and people needed to fulfil it. Dispatch, scheduling, maintenance requirements and partner capacity are considered together so that customers understand the resources assigned to their movement.

The wider service scope

04 Specialist transport

A separate brief for demanding loads.

Bulk, tanker and project movements require equipment and expertise suited to the specific load. Each requirement is assessed with appropriate specialist partners. Handling conditions, route constraints and the responsibilities of all parties are agreed as part of the scope.

05 Customer communication

Useful information at meaningful milestones.

Customers need a clear picture of collection, progress and delivery. We define the reporting points and escalation contacts for the service, with attention to delays, changes in requirements and confirmation at the destination.

06 Partner capacity

A wider network with clear accountability.

Partner transport can support varying demand and specialist requirements. The service brief must still define equipment suitability, communication expectations and handover responsibilities. Customers should know who is responsible for each stage of the movement.

03 / MARKETS & APPLICATIONS

Where the business fits

Manufacturers & distributors	Movement between production sites, warehouses and customer destinations.
Mining & industrial customers	Cargo coordination connected to site requirements and industrial supply chains.
Regional trade	Road freight and logistics interfaces serving businesses across African markets.

A brief that becomes a working plan

The starting point is a clear requirement. The scope, partner roles and delivery arrangements develop around the customer, the market and the work to be done.

01

Scope the cargo

Confirm dimensions, handling needs, collection details and the delivery requirement.

02

Plan the movement

Align suitable capacity, routing and the necessary corridor arrangements.

03

Coordinate the journey

Maintain agreed communication between dispatch, partners and the customer.

04

Close the handover

Confirm delivery and review any exceptions against the original service brief.

A USEFUL FIRST CONVERSATION

Tell us the requirement, its location and the intended timing. A clear brief helps identify the relevant business and the next information needed.

05 / OPERATING PRINCIPLES

The standard behind the work

Cargo suitability

The load determines the equipment, handling and operational approach.

Driver and road safety

Journey planning must consider safe operating conditions and relevant requirements.

Visible responsibility

Named contacts and clear handovers support dependable communication.

Commercial clarity

Scope, exclusions and the basis of the service should be understood before dispatch.
